DETAILED ACTION

Election/Restrictions

1. Claims 2-3 and 5 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 3/20/2009.

Response to Arguments

2. Answer to Arguments with Traverse:

Applicant's election with traverse of group 1 claims 1 and 4 in reply filed on 03/20/2009 is acknowledged.

The traversal on the group(s) that *"No unduly extensive or burdensome search would be required to examine the various claims of the noted Groups in the same application.... Moreover, from the standpoint of costs to the Applicants involved in filing, issuance and maintenance fees relating to separate applications if the present Restriction Requirement is maintained, it is clear that there is substantially more burden on Applicants by imposing the present Requirement than on the Patent Office if the Requirement were withdrawn. In addition, it is noted that to require the claims of the various Groups to issue in separate patents would result in inconvenience to the public by necessitating reference to more than one patent during searching, to review closely related subject matter".* This is not found persuasive because group 1 (claims 1 and 4) drawn to a single side-band modulation, classified in class 375, subclass 301 and group 2 (claims 2, 3 and 5), drawn to single side-band demodulation,

classified in class 375, subclass 321. These two groups are distinct inventions which are claimed in a single application.

Specification

3. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Objections

4. Claims 1 and 4 are objected to because of the following informalities:

(1) In claims 1 and 4, define acronyms “SSB”, “USB”, and “LSB” in the claim.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. **Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Daoud et al. (US 4835791) (disclosed in the IDS filed on 01/23/2006).**

Regarding claims 1 and 4:

As shown in figures 1-3, Daoud et al. disclose a modulation apparatus comprising:

- a first frequency-increasing SSB modulator (**30 in figure 2**) that performs SSB modulation on a first input symbol (**S2 in figure 2**) to obtain a USB signal (**USB in figure 2**) (col 2, lines 29-47);
- a second frequency-increasing SSB modulator (**50 in figure 2**) that performs SSB modulation on a second input symbol (**S1 in figure 2**) to obtain a LSB signal (**LSB in figure 2**) (col 2, lines 29-47); and
- a combiner (**70 in figure 2**) that combines the USB (**USB in figure 2**) signal and the LSB signal (**LSB in figure 2**) (col 2, lines 29-47),
- wherein the second frequency-increasing SSB modulator performs SSB modulation using a carrier frequency higher than a carrier frequency used in the first frequency-increasing SSB modulator by the fundamental frequency of the input symbol (col 4, lines 38-49).

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Hurst et al. (US 4866521) disclose an advanced compatible television system with auxiliary carrier.
- Montreuil et al. (US 5477199) disclose a Digital quadrature amplitude and vestigial sideband modulation decoding method and apparatus.
- Dorrough et al. (US 7016659) disclose an amplitude modulation with time- and spectrum-shared sidebands.
